

Citizens Bank

Location: Anamosa, Iowa

Completed: 2011

Size: 5,000 s.f.
(Renovation)

Construction: Masonry, limestone,
and vinyl siding

Developer: Citizens Bank

Before

After

In 2007, Citizens Bank decided it was time to update their Anamosa branch. The existing facility measured 5,000 square feet and is located on Main Street, in downtown Anamosa.

The bank's goals for this project were to update the aesthetics of the facility with more durable and energy efficient materials. The wood siding was replaced with lower maintenance simulated vinyl shakes. The large expanses of single paned glazing on the front façade were replaced with energy efficient insulated glass. The remodel also paid homage to Anamosa's stone quarry history by incorporating local Anamosa limestone in rough cut blocks on the façade and as a flooring material.

The interior of the facility also received a facelift, using lighter colored materials. The size of the teller area was increased to meet current demands by moving them beyond the existing columns. The existing structure, which was prominently painted and exposed, was enclosed to give the space a more up-to-date feel. Other interior renovations included changing cubicle style office spaces into closed offices, as well as reworking the lighting.
