

St. Michael's Catholic Church

Location: Evergreen St.
Norway, Iowa

Completed: Spring 1996

Size: 6,000 s.f.

Construction: Masonry veneer &
wood framing

Developer: St. Michael's
Catholic Church

St. Michaels Catholic Church is a classic example of late 19th century Midwestern ecclesiastical architecture. The facility was originally constructed in 1891.

However, there came a point where the parishioners decided it was time to update and add on to the facility. A new connecting lobby was designed between the original church and the Parish Hall. This project also required handicapped restrooms, a modern kitchen area, and a multi-purpose room with folding partitions that could be utilized both for banquets and class room space. In addition, a daily chapel area and new office space was provided.

The facility utilizes a brick and stone veneer on the outside to mesh with the existing building and has a new sheltered entry to protect parishioners as they arrive for worship.
